

Prompt:

Write a Python program to accept two numbers from the user and perform basic arithmetic operations such as addition, subtraction, multiplication, and division. Display the results of each operation using the format() method.

Program:

#store input numbers:

```
num1=input("Enter first number:")
```

```
num2=input("Enter scecond number:")
```

#Add two numbers

```
sum=float(num1)+float(num2)
```

#Subtract two numbers

```
min=float(num1)-float(num2)
```

#Multiply two numbers

```
mul=float(num1)*float(num2)
```

#Divide two numbers

```
div=float(num1)/float(num2)
```

#Display the sum

```
print('The sum of {0} and {1} is {2}'.format(num1,num2,sum))
```

#Display the subtraction

```
print('The subtraction of {0} and {1} is {2}'.format(num1,num2,min))
```

#Display the multiplication

```
print('The multiplication of {0} and {1} is {2}'.format(num1,num2,mul))
```

#Display the division

```
print('The division of {0} and {1} is {2}'.format(num1,num2,div))
```

Output:

Enter first number:10

Enter ssecond number:2

The sum of 10 and 2 is 12.0

The subtraction of 10 and 2 is 8.0

The multiplication of 10 and 2 is 20.0

The division of 10 and 2 is 5.0
