

Prompt:

Write a Python program to demonstrate the looping control statements `break` and `continue`, and the placeholder statement `pass`.

1. Use a for loop with `break` to print numbers from 1 to 5 and terminate the loop when the value reaches 3.
2. Use another for loop with `continue` to print numbers from 1 to 6 while skipping the number 4.
3. Use an if-else statement with `pass` to demonstrate that when `x` is greater than 5, no action is performed, followed by printing "Done".
4. Display the output produced by each section of the program.

Program:

```
for i in range(1,6):
```

```
    if i==3:
```

```
        break
```

```
    print(i)
```

```
for i in range(1,7):
```

```
    if i==4:
```

```
        continue
```

```
    print(i)
```

```
x=10
```

```
if x>5:
```

```
    pass
```

```
else:
```

```
    print("Less than 5")
```

```
print("Done")
```

Output:

1

2

1

2

3

5

6

Done
