

Prompt:

Write a Python program to demonstrate string formatting using the `format()` method.

Create two variables, `name` and `age`, and assign them the values "John" and 23 respectively. Use the `format()` method to display a sentence containing the person's name and age.

Program:

```
name="John"
```

```
age=23
```

```
print("My name is {} and i am {} years old.".format(name,age))
```

Output:

My name is John and i am 23 years old.
