

Prompt:

Write a Python program to check whether a number entered by the user is positive, negative, or zero. Use if, elif, and else statements to compare the number with zero. If the number is greater than zero, display that it is a positive number; if it is equal to zero, display that it is zero; otherwise, display that it is a negative number.

Program:

```
num=float(input("Enter a number:"))
```

```
if num>0:
```

```
    print("{0}is a positive number".format(num))
```

```
elif num==0:
```

```
    print("{0}is zero".format(num))
```

```
else:
```

```
    print("{0}is negative number".format(num))
```

Sample Outputs:

Enter a number:5

5.0is a positive number

Enter a number:4

4.0is a positive number
